VOLUNTEERING

President / Vice President / HR Lead

Yeditepe University Education

Research Club

I built the club's structure and ran team coordination and board communication.

Social Impact Projects

Earthquake Relief & Toy Bars

I took part in school aid projects after the Hatay and Kahramanmaraş earthquakes and in activities for the children of imprisoned mothers.

ABOUT ME

I graduated from Yeditepe University in International Trade and Business Administration in July 2026. In my first job I automated the repetitive work the sales, e-commerce and marketing teams were doing; both tools are still in use and still save the team hours every month. I then joined the BTS & Partners Legal Tech team to do the same thing at a larger scale and built an autonomous agent pipeline that watches 107 sources through the day. What draws me is not writing tools, it is designing a process end to end and making it measurable. Outside work I build the tools I need myself; right now that is an app keeping my work and what I learn in one connected graph.

EXPERIENCE

AI Research & Automation Intern

Apr 2026 - Jul 2026

BTS & Partners · A technology and data law firm advising global technology companies such as Microsoft, Apple, LinkedIn, Meta and Snapchat

- I built scheduled cloud agents in Python, Supabase and Streamlit that scan 107 news and regulator sources through the day, 16 of them public bodies, which took the daily regulatory sweep off human hands.
- I normalised the MIT AI Risk Repository, the CSET harm taxonomy and mitigation records into one relational schema, then designed the weighted scoring algorithm and rule engine that sorts the risk, harm and mitigation chain into criticality bands (NIST AI RMF, ISO 42001, EU AI Act).
- I ran a weighted scoring study to measure large language model accuracy in contract analysis, and benchmarked English to Turkish translation quality across models on data protection texts.
- I evaluated legal AI platforms and Microsoft AI products and turned the findings into executive reports and presentations.

Operations and Sales Associate

Oct 2024 - Aug 2025

Tradist Distribution · Turkish distributor of Herschel, XD Design, Allbirds, Crosley, Sunnyslife and Kikkerland

- I ran an e-commerce channel handling around 100 orders a day: keeping product content current, syncing stock and prices, and tracking order flow through campaign periods.
- I built a reporting automation that pulls from each marketplace API and produces one standard report for the company, saving at least 5 hours a month of manual reporting.
- I wrote an Android app that collects verification codes arriving on several lines into one place, saving each person on the team around 20 minutes a day.
- I worked on B2B sales to corporate customers, tracked orders from request to delivery and stepped in early when one slipped.
- I ran the coordination between the sales, warehouse and supply units and the brand representatives and corporate customers.

PROJECTS

AI AUTOMATION · REGULATORY MONITORING

Regulatory Monitoring and Newsletter Automation

I built an autonomous agent pipeline that scans 107 public and regulator sources through the day. A collector agent pulls each item, produces a Turkish summary with a relevance score and a topic tag and writes it to a central database; two publisher agents, one for legislation and one for news, send the newsletter out over corporate email. The pipeline runs with no manual intervention.

PERSONAL TOOL · KNOWLEDGE GRAPH

Work Tracking Module

An app that keeps the work I do and what I learn in one database, linking notes by typed relationships instead of folders. Every note is a node and every link has a type, so when a task closes the knowledge does not close with it: the next task touching the same concept finds the earlier findings already there. It holds 177 nodes, 415 links and 16 relationship types, and I used it daily through the internship.

AUTOMATION · INTERNAL TOOL

Tradist SMS Tracking System

A background Android app I wrote to collect verification codes arriving on several lines into one place. It listens to incoming messages, parses the code and writes it instantly to a shared Google Sheet, so the team reaches the code without picking up the phone. It keeps running after a device restart. I wrote it when the need came up.
